Set up Inventory for BarCodes

PROGRAM NAME: BARSET
MENU OPTION TITLE: Set up Inventory for BarCodes
MAIN MODULE: BARCODE SYSTEM
HELP KEY ACTIVE: NO

PROGRAM OVERVIEW

This basic utility program can be used to install unique barcodes in the part master file. First, you need to go to {SYSGUT}, go to page 4, and set up the UPC Code for your company. You received this number when you applied for it. Next, you will need to set up the beginning UPC part identifier, which can only be 5 digits long. This must be a number and is usually different than your part number. Set the flag to <Y> so that from this point forward, when anyone creates a new part number, the system will automatically set up a unique UPC code for that part.

NOTE: the program will ignore any part that already has a code set up.

PROGRAM OPERATION

Do the above first, then run this program. It will automatically load the data and send you back to the menu!
