

Inventory MIN/MAX Value

PROGRAM NAME: INVALUE1

MENU OPTION TITLE: Inventory MIN/MAX Value

MAIN MODULE: PARTS/RPTS FINANCIAL

HELP KEY ACTIVE: NO

PROGRAM OVERVIEW

This program is one of our best inventory managing tools to help sort out areas of your inventory that need attention. It will display standard value of all inventory at minimum and maximum quantities for {RAW} and {FIN} categories. This way you get a feel for where you are in actual inventory counts. It will help you to determine if you are too heavy in some areas of inventory and too light in others. This is a great way to analyze and customize your future purchasing habits.

Inventory value reports do not include defective quantities... As you assign inventory to defective, it goes into its own database and can be monitored independent of usable inventory. We have separate reports in the defective system that gives you that information.
