

Payroll Processing Hourly

PROGRAM NAME: PREARND1

MENU OPTION TITLE: Payroll Processing Hourly

MAIN MODULE: PAYROLL

HELP KEY ACTIVE: YES

PROGRAM OVERVIEW

This program calculates all the payroll checks for the hourly employees. After it has been run, if you decide there must be some corrections to the time input, you will need to run the program {Restart Payroll Cycle/PRESTART} to clear the work files and allow recalculation. You can do this as many times as necessary.

You can also run the program {Payroll Processing Salary/PREARND2} before or after you have ran this program, for consolidated pre-check register printing, check printing, post check register, and post payroll processing. Do it all together!

PROGRAM OPERATION

PAYROLL PROCESSING FOR HOURLY EMPLOYEES
