

Adjust RAW/FIN Quantities

PROGRAM NAME: WOINVCN4

MENU OPTION TITLE: Adjust RAW/FIN Quantities

MAIN MODULE: PARTS MAINTENANCE

HELP KEY ACTIVE: NO

PROGRAM OVERVIEW

This program adjusts inventory level counts after a physical inventory has been taken. CAUTION: You will not be able to enter more than you have ever purchased. This would circumvent having a cost bucket behind the quantity on hand. If this error occurs, you will need to create a purchase order <POENTRY> and update it. NOTE: This program should not be made available to all users and should only be accessible to those with the authority to manipulate inventory quantities.

PROGRAM OPERATION

PART NUMBER TO ADJUST: < >: Type the part number you wish to adjust stock level for. If you don't know the model number, use the <IFF> system to help locate the part number.

ADJUST (R)AW OR (F)IN:

CURRENT STOCKING LEVEL: This field will show you current stock level for verification.

ENTER NEW STOCKING LEVEL: Type the quantity that will correct the inventory part imbalance.
